Bill Gale from our fisheries office who I work with on some issues would like to participate on the call. Could we call you this afternoon at 1:30 or 2?

May 15th still works for a visit. I also had some item to discuss with you. I'm in the office this week on Monday and Wednesday (509) 548-2928 and at home working the rest of the weekdays

Hi Malenna,

I was wondering whether May 15 still works for you for us to visit the hatchery. I'm waiting to hear from Erin if that date will work for her, but I thought we should get it on the calendar as a placeholder.

Also, I'll plan on giving you a call next week to give you an update on where things are. We're working with Ecology to receive a draft 401 certification. As part of that, there have been some questions that have come up on toxics. Do you have data on any priority pollutants toxics monitoring at the hatchery? As far as I could see, LNFH has not been required to monitor for toxic priority pollutants, but just wanted to check in with you on that. It's possible that you or Travis gave some information to Jill, but we weren't able to find it readily. If there's other toxics monitoring I should be aware of, please let me know. I'm aware of information on formalin collected through EPA's study at the LNFH hatchery and that it showed that formalin use from LNFH wasn't adversely impacting downstream waters.

Thanks, and if you have questions, please feel free to call or email me.
